Number sequences questions usually consist of four to seven visible numbers along with a single missing number or, depending on the sequence's complexity level, 2 or 3 missing numbers. All term in the sequence meet a specific logical rule which needs to be recognised in order to find the missing terms.

Applying Fibonacci levels at these events would have revealed a downside price target. Trend changes – Prices often consolidate near retracement levels. Regardless of a trend’s potential, approaching retracements will slow the pace. Price targets – The most applicable use of Fibonacci levels are price targets. When AAPL bottomed at \$79.60 and began rallying, the 38% retracement level of \$126 was an obvious price target.
