Transform your students into smart, savvy consumers of the media. Mass Communication: Living in a Media World (Ralph E. Hanson) provides students with comprehensive yet concise coverage of all aspects of mass media, along with insightful analysis, robust pedagogy, and fun, conversational writing. In every chapter of this bestselling text, students will explore the latest developments and current events that are rapidly changing the media landscape. This newly revised Sixth Edition is packed with contemporary examples, engaging infographics, and compelling stories about the ways mass media shape our lives. From start to finish, students will learn the media literacy principles and critical thinking skills they need to become savvy media consumers.

Media and Power addresses three key questions about the relationship between media and society. \*How much power do the media have? \*Who really controls the media? \*What is the relationship between media and power in society? In this major new book, James Curran reviews the different answers which have been given, before advancing original interpretations in a series of ground-breaking essays. This book also provides a guided tour of the major debates in media studies. What part did the media play in the making of modern society? How did 'new media' change society in the past? Will radical media research recover from its mid-life crisis? Is public service television the dying product of the nation in an age of globalization? Media and Power provides both a clear introduction to media research and an innovative analysis of media power.

Get up to speed on the revolutionary changes in Office for the Mac The 2011 version of the Microsoft Office productivity suite for the Mac sports major changes from what Mac users are accustomed to. This soup-to-nuts guide gets the Mac crowd up to date quickly and easily. A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.

Electromagnetics for Engineering Students starts with an introduction to vector analysis and progressive chapters provide readers with information about dielectric materials, electrostatic and magnetostatic fields, as well as wave propagation in different situations. Each chapter is supported by many illustrative examples and solved problems which serve to explain the principles of the topics and enhance the knowledge of students. In addition to the coverage of classical topics in electromagnetics, the book explains advanced concepts and topics such as the application of multi-pole expansion for scalar and vector potentials, an in depth treatment for the topic of the scalar potential including the boundary-value problems in cylindrical and spherical coordinates systems, metamaterials, artificial magnetic conductors and the concept of negative refractive index. Key features of this textbook include: • detailed and easy-to follow presentation of mathematical analyses and problems • a total of 681 problems (162 illustrative examples, 88 solved problems, and 431 end of chapter problems) • an appendix of mathematical formulae and functions Electromagnetics for Engineering Students is an ideal textbook for first and second year engineering students who are learning about electromagnetism and related mathematical theorems.

After broadband access, what next? What role do metrics play in understanding "information societies"? And, more important, in shaping their policies? Beyond counting people with broadband access, how can economic and social metrics inform broadband policies, help evaluate their outcomes, and create useful models for achieving national goals? This timely volume not only examines the traditional questions about broadband, like availability and access, but also explores and evaluates new metrics more applicable to the evolving technologies of information access. Beyond Broadband Access brings together a stellar array of media policy scholars from a wide range of disciplines—economics, law, policy studies, computer science, information science, and communications studies. Importantly, it provides a well-rounded, international perspective on theoretical approaches to databased communications policymaking in the Americas, Europe, Asia, and Africa. Showcasing a diversity of approaches, this invaluable collection helps to meet myriad challenges to improving the foundations for communications policy development.

The popular DISCOVERING COMPUTERS is now revised, based on customer feedback, to reflect the evolving needs of today's Introductory Technology students. This exciting new edition maintains proven hallmarks that ensure students know what they need to be successful digital citizens in college and beyond. This edition offers the latest coverage of today's digital world with an emphasis on enterprise computing, ethics, Internet search skills, mobile computing, various operating systems, browsers and security. Critical thinking and problem-solving exercises throughout the text reinforce key skills, while end-of-chapter activities provide hands-on practice. DISCOVERING COMPUTERS provides the content your students need, presented in a way that ensures their success. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This interdisciplinary Research Agenda contains state-of-the-art surveys of the field of corruption and points towards an agenda for future research. This comprehensive work covers the main approaches to diagnosing, analysing and measuring corruption, as well as the ways to tackle it. Chapters explore top political and grassroots corruption, buying and stealing votes, corruption in relation to gender and the media, digital anti-corruption and an examination of whistleblowing and market-based tools.
