Based on your answer to Key Question 5, complete the following statement: Collision theory states that a reaction is most likely to occur if&mldr; If the reactants collide with the correct amount of energy and correct orientation. Exercise 1. Hydrogen gas and iodine vapor combine to form hydrogen iodide gas, as shown in the equation  $H_2 + I_2 \rightarrow 2 HI$ .

between particles when they collide (hit each other). The collision between reactant particles is necessary but not sufficient for a reaction to take place. The collisions also have to be effective. It is important to understand the exact nature of an effective collision since this determines whether or not particles actually react with each other and form new products.

TES OF THE KINETIC MOLECULAR THEORY Gases consist of tiny particles (atoms or molecules), These particles are so small, compared with the distances between them that the volume (size) of the individual particles can be assumed to be negligible (zero). The particles are in constant random motion, colliding with the walls of the container.

## Collision Theory Pogil Answer Key

Collision Theory. Collision theory basically explains how reactions occur and why different reactions have different reactions rates. It states that: Molecules must collide in order to react. In order to effectively initiate a reaction, the molecules in the collisions must have sufficient energy to bring about disruptions in the bonds of molecules.
