Offers a lucid overview of the central issues in bioethics today, including reproductive technologies, right-to-die, AIDS, eugenics, and human genetics. Presenting differing viewpoints from world-renowned scholars, this thought-provoking book provides an excellent framework for analyzing key issues.

This anthology represents all of the most important points of view on the most pressing topics in bioethics. Containing current essays and actual medical and legal cases written by outstanding scholars from around the globe, this book provides readers with diverse range of standpoints, including those of medical researchers and practitioners, legal exerts, and philosophers.

Contemporary Issues in Bioethics presents a breadth of issues and balanced coverage of the most important topics in bioethics, including human reproduction, euthanasia and assisted suicide, genetics, the right to health care, organ transplantation, human and animal research, and planning for threats to public health. With a diverse range of classic and contemporary essays written by scholars in bioethics and judges in landmark legal cases, this anthology will help you understand issues from a variety of perspectives.

"The ethical issues we face in healthcare, justice, and human rights extend beyond national boundaries-they are global and cross-cultural in scope. The second edition of this interdisciplinary and international collection features new essays on gender identity, vaccines, stem cells, bioterror, and other pressing contemporary concerns"--

Contains articles published previously in various sources.

How do we understand and also assess the health care of America? Where is health care provided? What are the characteristics of those institutions which provide it? Over the short term, how are changes in health care provisions affecting the health of the population, the cost of care, and access to care?. Health Care Delivery in the United States, now in a thoroughly updated and revised 9th edition, discusses these and other core issues in the field. Under the editorship of Dr. Kovner and with the addition of Dr. James Knickman, Senior VP of Evaluation, Robert Wood Johnson Foundation, leading thinkers and practitioners in the field examine how medical knowledge creates new healthcare services. Emerging and recurrent issues from wide perspectives of health policy and public health are also discussed. With an easy to understand format and a focus on the major core challenges of the delivery of health care, this is the textbook of choice for course work in health care, the reference for administrators and policy makers, and the standard for in-service training programs.;chapter

The book provides readers with diverse views from many standpoints, including medical researchers and practitioners, legal experts, and philosophers.

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice – the maqa' sid – which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.
