Docker Compose

has an `-f` flag

where you can

pass in the

location of the

`docker-`

`compose.yml` file

(or a custom

file if you

happen to name

it something

Access Free

Docker Up

different). That means you could run: `docker-compose -f /tmp/myproject/docker-compose.yml up -d` from anywhere on your file system and things will work. I use this a lot in my scripts.
