"Drugs, Brains, and Behavior" is an online textbook written by C. Robin Timmons and Leonard W. Hamilton. The book was previously published by Prentice Hall, Inc. in 1990 as "Principles of Behavioral Pharmacology." The authors attempt to develop an understanding of the interpenetration of brain, behavior and environment. They discuss the chemistry of behavior in both the literal sense of neurochemistry and the figurative sense of an analysis of the reactions with the environment.

This text provides an introduction to the basic facts and major issues concerning drug-taking behavior. In today's world, drugs and their use present a social paradox, combining the potential for good and for bad. As a society and as individuals, we can be the beneficiaries of drugs or their victims.

Here is a comprehensive review of adolescent substance abuse issues and an expansive, empirically based curriculum for school-based programs to teach adolescents about the dangers of drugs and alcohol. The abuse of alcohol and other drugs among young people is a problem of alarming scope and gravity. Adolescent Substance Abuse explores the multiple forces which impact adolescents and can push them toward drug and alcohol abuse. Adolescent Substance Abuse proposes means by which to effect macro-level change in societal norms and values regarding substance abuse. The authors describes in

detail an effective means of teaching adolescents about drugs and alcohol using an empirically based teaching method called Teams-Games-Tournaments (TGT). TGT was developed through extensive research on games used as teaching devices. It uses small groups as classroom work units and capitalizes on peer influence by using peers as teachers and supporters. The book explains an effective curriculum which utilizes the TGT approach and provides a program for parents. The curriculum is unique in that it is anchored in empirical data and delivered via adolescent peer groups. Adolescent Substance Abuse addresses other issues pertinent to the reduction of adolescent substance abuse by exploring subsystems of change, including school and peer group environments, home and family, the media, community movements, and business and industry. The book is a great source of innovative ideas for beginning and expert counselors, social workers, mental health professionals, school psychologists, and others who want to prevent adolescent abuse of drugs and alcohol.

This work focuses on the many critical areas of America's drug problem, providing a foundation for rational decision making within this complex and multidisciplinary field. Broken up into three sections, Understanding the Problem, Gangs and Drugs, and Fighting Back, topics covered include the business of drugs and the role of organized crime in the drug trade, drug legalization and decriminalization, legal and law enforcement strategies, an analysis of the socialization process of drug use and abuse, and a historical discussion of drug abuse that puts the contemporary drug problem into perspective.

Does success in school protect teenagers from drug use? Does drug use impair scholastic success? This book tackles a key issue in adolescent development and health - the education-drug use connection. The authors examine the links and likely causal connections between educational experiences, delinquent behavior, and adolescent use of tobacco, alcohol, marijuana, and cocaine. The book uses data from the University of Michigan's Monitoring the Future project. It focuses on a large and nationally representative sample of 8th grade students in the United States who were initially surveyed in 1991-1993 and then followed over the vitally important developmental period between ages 14 and 22. The volume uses a variety of statistical analysis techniques, and the findings can be understood by individuals with limited, as well as with extensive, backgrounds in research design. The findings convincingly demonstrate that if young people can be successful in school, it can improve a broad range of outcomes in their lives, not the least of which is their ability to resist pressures to use drugs. The book provides: a summary of the findings and conclusions; a review of relevant literature; a detailed discussion of the survey and analysis methods; the academic attainment of those in the longitudinal panel; the delinquent behaviors of panel members as they relate to measures of educational success; and the patterns of initiation, continuation, and cessation for each substance: cigarettes, marijuana, cocaine, and alcohol. This book is intended for anyone who deals with education and/or substance use, including educational, developmental, and social psychologists; sociologists; epidemiologists; educators; and policy makers. The analysis of panel survey data, using a variety of techniques, will also appeal to survey methodologists and students.
