## Governance of the Illegal Trade in E-Waste and Tropical ...

Abstract Illegal wildlife trade (IWT) has increased in profile in recent years as a global policy issue, largely because of its association with declines in prominent internationally trafficked species. In this review, we explore the scale of IWT, associated threats to biodiversity, and appropriate responses to these threats.

This book responds to the call for more research on transnational environmental crime and its governance by investigating the illegal trade in electronic waste (e-waste) and tropical timber, major forms of transnational environmental crime. The book is based on a qualitative multi-method research combining document analysis, interviews with key informants and field visits. Bisschop focuses on the flows that pass through the research setting of the Port of Antwerp (Belgium) and those between Europe and West and Central Africa. The study examines the emergence and social organization of these transnational environmental flows, illustrating that although profit or lure play a very important role, a range of factors on individual, organizational and societal levels together provide the motivations and opportunities. Building on these insights, the book addresses the governance of these two cases. The responsive regulatory pyramid and networked governance are used as theoretical frameworks for this analysis. This book is essential reading for scholars and academics interested in transnational environmental crime and corporate crime, as well as governance studies.

In countries affected by the illegal wildlife trade, corruption is a key enabler and facilitator. Failure to address this corruption, and the institutional and governance gaps that allow it to take place, make tackling the illegal wildlife trade a significant challenge. This report provides a ...

This report examines governance frameworks to counter illicit trade. It looks at the adequacy and effectiveness of sanctions and penalties applicable, the steps parties engaged in illicit trade take to lower the risk of detection - for example through small shipments - and the use of free trade ...

responsive regulatory pyramid and networked governance are used as theoretical frameworks for this analysis. This book is essential reading for scholars and academics interested in transnational environmental crime and corporate crime, as well as governance studies.

In countries affected by the illegal wildlife trade, corruption is a key enabler and facilitator. Failure to address this corruption, and the institutional and governance gaps that allow it to take place, make tackling the illegal wildlife trade a significant challenge. This report provides a structured analysis of how corruption facilitates wildlife crime based on research in four source and transit countries in East and Southern Africa. It offers a series of specific recommendations targeted at national governments, donors, and intergovernmental organisations to address the issues of corruption and the illegal wildlife trade.

Wildlife crime poses a serious and irrefutable risk to global biodiversity and is a driver of the current global extinction crisis. Southeast Asia accounts for up to a quarter of global demand for illegal wildlife products, and is also both a source and transit region for this transnational trade. This report examines the governance frameworks for countering illegal wildlife trade in Indonesia, Singapore, Thailand and Viet Nam. After assessing the effectiveness of several responses to wildlife crime in these countries, the report provides recommendations for strengthening the capacities of the institutions involved and improving strategies to counter illegal wildlife trade.

Environmental crimes are primarily driven by financial motives. The combined financial value of illicit trade in protected wildlife, illegal logging and waste trafficking is estimated to come directly after counterfeiting, the narcotic drugs trade and illegal gambling. Logically, the proceeds of these crimes must also be laundered. Goods, however, are not the only money maker for environmental criminals. Corporations may also try to 'save' costs by not complying with environmental regulations and thus commit crimes of omission rather than commission. From an enforcement and compliance perspective focusing on the proceeds of crime may therefore be an effective strategy. This book brings together different perspectives on the financial aspects of environmental crime and harm from a green criminological viewpoint. It addresses the role of economic systems, the value of environmental performance for corporations, money laundering in the context of environmental crime, financial investigation and questions of regulation and penalties. Discussing these topics from the view of green criminology, sociology and governance, this book will be of great interest to all those concerned about

# Acces PDF Governance Of The Illegal Trade In E Waste And Tropical Timber Case Studies On Transnational Environmental Crime Green Criminology

the financial dimensions of crime and the environment.

Environmental crime is one of the most profitable and fastest growing areas of international criminal activity. The increasing cross-border scope of environmental crimes and harms is one of the reasons why governments and the enforcement community have trouble in finding the proper responses. Law enforcement cooperation between western industrialized states is often time consuming and problematic, and the problems increase exponentially when environmental criminals take advantage of situations where government and law enforcement are weak. This book provides an overview of the developments and problems in the field of transnational environmental crimes and harms, addressing these issues from perspectives such as enforcement, deterrence, compliance and emission trading schemes. Divided into four parts, the authors consider global issues in green criminology, responses to transnational environmental crimes and harms, alternative methods to combat environmental crime, and specific types of crimes and criminological research. Discussing these topics from the view of green criminology, sociology and governance, this book will be of great interest to all those concerned about the transnational dimensions of crime and the environment.
