"Far too many people around the world know the pain of losing a loved one to drowning. Each year almost 360,000 people die from drowning--over 90% of them in low- and middle income countries. More than half of these deaths are among those younger than 25, with children aged under 5 facing the greatest risk. Drowning is the third leading cause of death worldwide for those aged from 5 to 14. Despite these tragic facts, drowning prevention gets relatively little attention and few resources. There is far more we can do to prevent drowning. Global commitments made as part of the Sustainable Development Goals, for example, cannot be met as long as this preventable cause of death is left largely unchecked. All of us--policymakers, parents, non-profit organizations, businesses and concerned citizens--can help prevent drowning. Explaining how is the goal of this guide. Building on the World Health Organization's 2014 Global report on drowning, the following pages provide practical, step-by-step guidance on how to implement 10 effective measures to prevent drowning. They range from community-based solutions, such as day care for children and barriers controlling access to water, to effective national policies and legislation around water safety, including setting and enforcing boating, shipping and ferry regulations. Data show that all of these solutions can help save lives. The more we work together to implement the measures outlined in this guide, the more lives can be saved. We urge all concerned to adopt as many of the interventions and strategies as their resources will allow, and to protect those most vulnerable without delay."--Page iv.

This book is a practical guide for health care professionals encountering medical emergencies during commercial flight. Health care providers should consider responding to emergencies during flight as there are often no other qualified individuals on board. This text covers the most common emergencies encountered during flight, both general medical emergencies and those specifically tied to the effects of flying, including cardiac, respiratory, and neurological issues. Medicolegal issues are considered in depth, for both United States domestic and international flights, as there is potential legal risk involved in giving medical assistance on a flight. Additional chapters are dedicated to pre-flight clearance and the role non-physician healthcare providers can play. In-Flight Medical Emergencies: A Practical Guide to Preparedness and Response is an essential resource for not only physicians but all healthcare professionals who travel regularly.

Following the publication of the department of health document - Comprehensive Critical Care (2000), the majority of hospitals in England have set up Critical Care Outreach Teams. The Government provided a significant sum of money for hospitals to set up outreach services. There are now calls for an evaluation of their impact. The book is set out in five key sections. Each section features chapters that address the conceptual and real life issues. In each section there is a chapter, set out as a case study example, demonstrating how innovative practices and service developments are going on around critical care outreach. The book will draw upon the knowledge, experience and clinical expertise of senior critical care nurses and doctors from a critical care network. The book will have a definite practical application and will provide tips to enhance practice. \* Chapters contain useful 'how to' guides, prompts for critical thinking and case studies. \* Very little has previously been published on this topic
