New Institutional Economics (NIE) has skyrocketed in scope and influence over the last three decades. This first Handbook of NIE provides a unique and timely overview of recent developments and broad orientations. Contributions analyse the domain and perspectives of NIE; sections on legal institutions, political institutions, transaction cost economics, governance, contracting, institutional change, and more capture NIE's interdisciplinary nature. This Handbook will be of interest to economists, political scientists, legal scholars, management specialists, sociologists, and others wishing to learn more about this important subject and gain insight into progress made by institutionalists from other disciplines. This compendium of analyses by some of the foremost NIE specialists, including Ronald Coase, Douglass North, Elinor Ostrom, and Oliver Williamson, gives students and new researchers an introduction to the topic and offers established scholars a reference book for their research.

Institutions frame behaviors and exchanges in markets, business networks, communities, and organizations throughout the world. Thanks to the pioneering work of Ronald Coase, Douglas North and Olivier Williamson, institutions are now recognized as being a key factor in explaining differences in performance between industries, nations, and regions. The fast-growing field of new institutional economics analyzes the economics of institutions and organizations using methodologies, concepts, and analytical tools from a wide range of disciplines (including political science, anthropology, sociology, management, law, and economics). With contributions from an international team of researchers, New Institutional Economics provides theoreticians, practitioners, and advanced students in economics and social sciences with a guide to the many recent developments in the field. It explains the underlying methodologies, identifies issues and questions for future research, and shows how results apply to decision making in law, economic policy, management, regulation and institutional design.

Consisting of 30 concise chapters written by top scholars, this Research Agenda probes the knowledge frontiers of issues long at the forefront of New Institutional Economics (NIE), including government, contracts and property rights. It examines pressing research questions surrounding norms, culture, and beliefs. It is designed to inform and inspire students and those starting their careers in economics, law and political science. Well-established scholars will also find the book invaluable in updating their understanding of crucial research questions and seeking new areas to explore.

This book examines and compares the 'old' institutionalism of Veblen, Mitchell, Commons, and Ayres, with the 'new' institutionalism developed from neoclassical and Austrian sources.

A concise and clear introduction to the new institutional economics that summarizes current knowledge whilst addressing its gaps and weaknesses.

This introduction to institutional economics, follows the history of the field since the early 20th century until the present day. It concentrates on influential authors in the main schools of institutional economics. Institutional economics is defined as economic thought that considers institutions to be relevant for economic theory, and consequently criticizes the neoclassical mainstream for having pushed them out of the discipline; it deals specially with the nature, the origin, the change of institutions, and their effects on economic performance. It is a family of different theories that were initially influential in economics, then lost much of their weight in the middle half of the 20th century, and eventually recovered significant creative vitality and impact in the last twenty years. The book puts the recent developments in historical perspective by showing how important themes like the importance of habits, the role of formal and informal rules, the relation of organizations and institutions, the hierarchy and complementarity of institutions, the evolutionary character of institutional change, have been explored by various authors or schools.

Institutional economics is a sociocultural discipline and policy science which draws on the idea that economies are best understood through an appreciation of history, real-world institutions, and socioeconomic interrelations. This book brings together leading institutionalists to examine the tradition 's most essential perspectives and methods. The contributors to the book draw on a broad range of institutional thought from the classic work of Thorstein Veblen, John R. Commons, and Karl Polanyi, to the newer viewpoints of post-Keynesian institutionalism, feminist institutionalism, and environmental institutionalism. Methods range from frameworks used to analyze public policy and institutional change, to modes of analysis including myth busting, historically grounded narratives, and computer-based simulations. Each chapter surveys the origins, development, key features, applications, and frontiers of a particular viewpoint, framework, or mode of analysis. Due consideration is given to both strengths and weaknesses; and woven into the chapters is attention to core institutionalist concepts, including technology, institutions, culture, and complexity. The book provides economists with promising starting points for new research, students with contributions refreshingly in touch with the real world, and policymakers and social scientists with compelling reasons for engaging further with the institutionalist tradition.

This second edition assesses some of the major refinements, extensions, and useful applications that have developed in neoinstitutionalist thought in recent years. More attention is given to the overlap between the New Institutional Economics and developments in economic history and political science. In addition to updated references, new material includes analysis of parallel developments in the field of economic sociology and its attacks on representatives of the NIE as well as an explanation of the institution-as-an-equilibrium-of-game approach. Already an international best seller, Institutions and Economic Theory is essential reading for economists and students attracted to the NIE approach. Scholars from such disciplines as political science, sociology, and law will find the work useful as the NIE continues to gain wide academic acceptance. A useful glossary for students is included. Eirik Furubotn is Honorary Professor of Economics, Co-Director of the Center for New Institutional Economics, University of Saarland, Germany and Research Fellow, Private Enterprise Research Center, Texas A&M University. Rudolph Richter is Professor Emeritus of Economics and Director of the Center for New Institutional Economics, University of Saarland, Germany.

In this landmark work, a Nobel Prize-winning economist develops a new way of understanding the process by which economies change. Douglas North inspired a revolution in economic history a generation ago by demonstrating that economic performance is determined largely by the kind and quality of institutions that support markets. As he showed in two now classic books that inspired the New Institutional Economics (today a subfield of economics), property rights and transaction costs are fundamental determinants. Here, North explains how different societies arrive at the institutional infrastructure that greatly determines their economic trajectories. North argues that economic change depends largely on "adaptive efficiency," a society's effectiveness in creating institutions that are productive, stable, fair, and broadly accepted--and, importantly, flexible enough to be changed or replaced in response to political and economic feedback. While adhering to his earlier definition of institutions as the formal and informal rules that constrain human economic behavior, he extends his analysis to explore the deeper determinants of how these rules evolve and how economies change. Drawing on recent work by psychologists, he identifies intentionality as the crucial variable and proceeds to demonstrate how intentionality emerges as the product of social learning and how it then shapes the economy's institutional foundations and thus its capacity to adapt to changing circumstances. Understanding the Process of Economic Change accounts not only for past institutional change but also for the diverse performance of present-day economies. This major work is therefore also an essential guide to improving the performance of developing countries.

'To those wishing to learn about the New Institutional Economics, this comprehensive collection of articles will be extremely valuable, exhibiting, as it does, the New Institutional Economics in all its variety, to those wishing to contribute to the New Institutional Economics, it will be an indispensable reference source.' - Ronald H. Coase, University of Chicago Law School, US 'These volumes disclose and develop the richness and importance of the New Institutional Economics - in conceptual, theoretical, empirical, and public policy respects. These timely volumes will be widely used by present students of the NIE and by social scientists and public policy analysts more generally.' - Oliver E. Williamson, University of California, Berkeley, US
