"This collection of readings can be used as a superb supplement in child and adolescent development courses or as the primary text in graduate-level seminars. The new edition offers 36 readings, 12 new to the collection."--Publisher's website.

This reader reprints critical essays published over the course of a 100-year history that grapple with the challenges of defining and justifying the presence of humanities instruction in medical education. It provides insights to some of the newer approaches that branch out from the familiar subjects of history and literature to include theater, art, poetry, and disability studies. With a comprehensive historiographical introduction as well as prefaces to each article, including new reflections by many of the original authors themselves, the volume enables reflection on how the diversity of disciplinary perspectives and multiplicity of theoretical frameworks relate to each other historically and thematically. This volume is an invaluable resource for anyone engaged with humanities in health care education.

This brief, thought-provoking collection evaluates historical perspectives in reading to show how

current reading practices have developed over time and provides an understanding of the development of significant issues in the field of literacy education. Richard Robinson carefully chose 46 selections with several aims in mind: to include the historical perspective so often neglected in other texts; to explain the evolution of reading practices and ideas across time as well as in terms of pedagogical development; and to illustrate the developing nature of literacy education.

This popular textbook is an authoritative chronological exploration of how the lives of children are shaped by biological and cultural factors. The book offers a lively, engaging, and always accessible examination of child development as a process involving the whole child within multiple, mutually influencing contexts. Throughout, the emphasis is on how the interaction of biology and culture contributes both to the universal pathways of development shared by all children and to the diverse developmental patterns that unfold in the lives of individual children. This is an accessible introduction to Developmental Psychology for students taking courses that focus on child and adolescent development. This book can also be purchased with the breakthrough online resource, LaunchPad, which offers innovative media content, curated and organised for easy assignability. LaunchPad's intuitive interface presents quizzing, flashcards, animations and much more to make learning actively engaging.

Is there an objective moral standard that applies to all our actions? To what extent should I sacrifice my own interests for the sake of others? How might philosophers of the past help us think about contemporary ethical problems? As the most recent addition to the Blackwell Readings in Philosophy series, *History of Ethics: Essential Readings with Commentary* brings together rich and varied excerpts of canonical work and contemporary scholarship to span the history of Western moral philosophy in one volume. Editors Star and Crisp, noted scholars in their fields, expertly introduce the readings to illuminate the main philosophical ideas and arguments in each selection, and connect them to broader themes. These detailed and incisive editorial commentaries make the primary source texts accessible to students while guiding them chronologically through the history of Western ethics. Structured around a thematic table of contents divided into three distinct sections, *History of Ethics* charts patterns in the development of ethical thought across time to highlight connections between intellectual movements. Selections range from the work of well-known figures such as Plato, Aristotle, Nietzsche, and Mill to the work of philosophers often overlooked by such anthologies, including Butler, Smith, Sidgwick, Anscombe, Foot, and Frankena. Star and Crisp skillfully arrange the collection to connect readings to contemporary issues and interests by featuring examples such as Aquinas on self-defense and the doctrine of double effect, Kant on virtue, and Mill's *The Subjection of Women*. Written for students and scholars of ethics, *History of Ethics* is a comprehensive collection of readings with expert editorial commentary that curates the most important and influential work in the history of ethics in the Western world.

The development of physical theory is one of our greatest intellectual achievements. Its products--the currently prevailing theories of physics, astronomy, and cosmology--have proved themselves to possess intrinsic beauty and to have enormous explanatory and predictive power. This anthology of primary readings chronicles the birth and maturation of five such theories (the heliocentric theory, the electromagnetic field theory, special and general relativity, quantum theory, and the big bang theory) in the words of the scientists who brought them to life. It is the first historical account that captures the rich substance of these theories, each of which represents a fascinating story of the interplay of evidence and insight--and of dialogue among great minds. Readers sit in with Copernicus, Kepler, and Galileo as they overturn the geocentric universe; observe the genius of Faraday and Maxwell as they "discover" the electromagnetic field; look over Einstein's shoulder as he works out the details of relativity; listen in as Einstein and Bohr argue for the soul of quantum mechanics in the Completeness Debate; and watch as Hubble and others reveal the history of the universe. The editors' approach highlights the moments of discovery that rise from scientific creativity, and the presentation humanizes the scientific process, revealing the extent to which great scientists were the first to consider the philosophical implications of their work. But, most significantly, the editors offer this as their central thesis: although each was ushered in by a revolution, and each contains counterintuitive elements that delayed its acceptance, these five theories exhibit a continuous rational development that has led them to a permanent place in the worldview of science. Accessible to the general reader yet sufficiently substantive that working scientists will find value in it, *The Tests of Time* offers an intimate look into how physical theory has been developed, by the brilliant people who have developed it.

A fascinating collection of writing by some of the finest minds the world has ever known. A must read for anybody with an interest in the history of psychology, with writings by Aristotle, Galileo, Descartes, Newton, Von Helmholtz, Thorndike and much more. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Free and Ennobled: Source Readings in the Development of Victorian Feminism covers the knowledge gap in the field of Victorian feminist studies. This book is the outgrowth of a college course on the Victorian Woman. This book is composed of ten chapters, and begins with an introduction to womanhood. The succeeding chapters deal with the emergence of feminism and the introduction of the Victorian Feminism

movement as part of social adjustment. Other chapters are devoted to controversial issues in women's right, including education, emancipation, work, and political rights. The final chapters discuss the achievements of the Victorian Feminism movement. This book will prove useful to sociologists.
