The vocabulary Schema.org does not (yet) offer a type for representing restaurant menus or single menu items. Their menu property expects text or URL as value. If there should ever be a type for menus, it would become another expected value.

~~structured data — schema.org restaurant menu — describing ...~~

Menus are now actual entities in schema.org with their own properties and subtypes. Objects of the type Menu now also have a hasMenuItem property, which can point to the new MenuItem entities, used to markup individual menu items. Now for each MenuItem you will be able to mark up its name, a description, its price, and even its nutritional values.

Nice recap :) I wrote about this back in January when the restaurant menu schema was moved to the working group (my github post kicked off the menu schema proposal). One of the things I believe it's important to focus on here is the increasing role that Google Local Search plays in many industries, and how schema is used by Google to keep many listings up to date.
