Geography of Ancestry, Inequality, and Opportunity. Our first question is whether meaningful variation in equality and opportunity exists across areas populated by different ancestral groups. Fig. 1 A-E plots the distribution of ancestries across CZs. These maps reveal considerable clustering: Germans and Scandinavians are overrepresented in the Midwest, and Italian and French descendants in the Northeast, while those with British ancestry are scattered throughout the country.

The Geography of Opportunity: Race and Housing Choice in ...

These methodological issues are highlighted in a geography of opportunity perspective, which calls attention to the continuing significance of race in patterning neighborhood outcomes (Briggs, 2005; powell and Graham, 2002; Squires and Kubrin, 2006). The limited racial/ethnic overlap in neighborhoods, combined with the impact of race-based stereotypes, may influence the utility of subjective assessments of neighborhood environment, which are commonly used in neighborhood effects research.

A popular version of history trumpets the United States as a diverse "nation of immigrants," welcome to all. The truth, however, is that local communities have a long history of ambivalence toward new arrivals and minorities. Persistent patterns of segregation by race and income still exist in housing and schools, along with a growing emphasis on rapid metropolitan development (sprawl) that encourages upwardly mobile families to abandon older communities and their problems. This dual pattern is becoming increasingly important as America grows more diverse than ever and economic inequality increases. Two recent trends compel new attention to these issues. First, the geography of race and class represents a crucial litmus test for the new "regionalism"—the political movement to address the linked fortunes of cities and suburbs. Second, housing has all but disappeared as a major social policy issue over the past two decades. This timely book shows how unequal housing choices and sprawling development create an unequal geography of opportunity. It emerges from a project sponsored by the Civil Rights Project at Harvard University in collaboration with the Joint Center for Housing Studies and the Brookings Institution. The contributors—policy analysts, political observers, social scientists, and urban planners—document key patterns, their consequences, and how we can respond, taking a hard look at both successes and failures of the past. Place still matters, perhaps more than ever. High levels of segregation shape education and job opportunity, crime and insecurity, and long-term economic prospects. These problems cannot be addressed effectively if society assumes that segregation will take care of itself. Contributors include William Apgar (Harvard University), Judith Bell (PolicyLink), Angela Glover

"A multidisciplinary examination of the social and economic changes resulting from increased diversity and their implications for economic opportunity and growth given persistent patterns of segregation by race and class, offering both public policy and private initiatives that would respond to those challenges"--Provided by publisher.

From a nationally recognized expert, a fresh and original argument for bettering affirmative action Race-based affirmative action had been declining as a factor in university admissions even before the recent spate of related cases arrived at the Supreme Court. Since Ward Connerly kickstarted a state-by-state political mobilization against affirmative action in the mid-1990s, the percentage of four-year public colleges that consider racial or ethnic status in admissions has fallen from 60 percent to 35 percent. Only 45 percent of private colleges still explicitly consider race, with elite schools more likely to do so, although they too have retreated. For law professor and civil rights activist Sheryll Cashin, this isn't entirely bad news, because as she argues, affirmative action as currently practiced does little to help disadvantaged people. The truly disadvantaged—black and brown children trapped in high-poverty environs—are not getting the quality schooling they need in part because backlash and wedge politics undermine any possibility for common-sense public policies. Using place instead of race in diversity programming, she writes, will better amend the structural disadvantages endured by many children of color, while enhancing the possibility that we might one day move past the racial resentment that affirmative action engenders. In *Place, Not Race*, Cashin reimagines affirmative action and champions place-based policies, arguing that college applicants who have thrived despite exposure to neighborhood or school poverty are deserving of special consideration. Those blessed to have come of age in poverty-free havens are not. Sixty years since the historic decision, we're undoubtedly far from meeting the promise of *Brown v. Board of Education*, but Cashin offers a new framework for true inclusion for the millions of children who live separate and unequal lives. Her proposals include making standardized tests optional, replacing merit-based financial aid with need-based financial aid, and recruiting high-achieving students from overlooked places, among other steps that encourage cross-racial alliances and social mobility. A call for action toward the long overdue promise of equality, *Place, Not Race* persuasively shows how the social costs of racial preferences actually outweigh any of the marginal benefits when effective race-neutral alternatives are available.

Shows how government created "ghettos" and affluent white space and entrenched a system of American residential caste that is the linchpin of US inequality—and issues a call for abolition. The iconic Black hood, like slavery and Jim Crow, is a peculiar American institution animated by the ideology of white supremacy. Politicians and people of all colors propagated "ghetto" myths to justify racist policies that concentrated poverty in the hood and created high-opportunity white spaces. In *White Space, Black Hood*, Sheryll Cashin traces the history of anti-Black residential caste—boundary maintenance, opportunity hoarding, and stereotype-driven surveillance—and unpacks its current legacy so we can begin the work to dismantle the structures and policies that undermine Black lives. Drawing on nearly 2 decades of research in cities including Baltimore, St. Louis, Chicago, New York, and Cleveland, Cashin traces the processes of residential caste as it relates to housing, policing, schools, and transportation. She contends that geography is now central to American caste. Poverty-free havens and poverty-dense hoods would not exist if the state had not designed, constructed, and maintained this physical racial order. Cashin calls for abolition of these state-sanctioned processes. The ultimate goal is to change the lens through which society sees residents of poor Black neighborhoods from presumed thug to presumed citizen, and to transform the relationship of the state with these neighborhoods from punitive to caring. She calls for investment in a new infrastructure of opportunity in poor Black neighborhoods, including richly resourced schools and neighborhood centers, public transit, Peacemaker Fellowships, universal basic incomes, housing choice vouchers for residents, and mandatory inclusive housing elsewhere. Deeply researched and sharply written, *White Space, Black Hood* is a call to action for repairing what white supremacy still breaks. Includes historical photos, maps, and charts that illuminate the history of residential segregation as an institution and a tactic of racial oppression.

A half century after the Fair Housing Act, despite ongoing transformations of the geography of privilege and poverty, residential segregation by race and income continues to shape urban and suburban neighborhoods in the United States. Why do people live where they do? What explains segregation's persistence? And why is addressing segregation so complicated? *The Dream Revisited* brings together a range of expert viewpoints on the causes and consequences of the nation's separate and unequal living patterns. Leading scholars and practitioners, including civil rights advocates, affordable housing developers, elected officials, and fair housing lawyers, discuss the nature of and policy responses to residential segregation. Essays scrutinize the factors that sustain segregation, including persistent barriers to mobility and complex neighborhood preferences, and its consequences from health to home finance and from policing to politics. They debate how actively and in what ways the government should intervene in housing markets to foster integration. The book features timely analyses of issues such as

Online Library The Geography Of Opportunity Race And Housing Choice In Metropolitan America James A Johnson Metro Series

school integration, mixed income housing, and responses to gentrification from a diversity of viewpoints. A probing examination of a deeply rooted problem, *The Dream Revisited* offers pressing insights into the changing face of urban inequality.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

In the 1960s, many believed that the civil rights movement's successes would foster a new era of racial equality in America. Four decades later, the degree of racial inequality has barely changed. To understand what went wrong, Patrick Sharkey argues that we have to understand what has happened to African American communities over the last several decades. In *Stuck in Place*, Sharkey describes how political decisions and social policies have led to severe disinvestment from black neighborhoods, persistent segregation, declining economic opportunities, and a growing link between African American communities and the criminal justice system. As a result, neighborhood inequality that existed in the 1970s has been passed down to the current generation of African Americans. Some of the most persistent forms of racial inequality, such as gaps in income and test scores, can only be explained by considering the neighborhoods in which black and white families have lived over multiple generations. This multigenerational nature of neighborhood inequality also means that a new kind of urban policy is necessary for our nation's cities. Sharkey argues for urban policies that have the potential to create transformative and sustained changes in urban communities and the families that live within them, and he outlines a durable urban policy agenda to move in that direction.

The idea of "The Green Book" is to give the Motorist and Tourist a Guide not only of the Hotels and Tourist Homes in all of the large cities, but other classifications that will be found useful wherever he may be. Also facts and information that the Negro Motorist can use and depend upon. There are thousands of places that the public doesn't know about and aren't listed. Perhaps you know of some? If so send in their names and addresses and the kind of business, so that we might pass it along to the rest of your fellow Motorists. You will find it handy on your travels, whether at home or in some other state, and is up to date. Each year we are compiling new lists as some of these places move, or go out of business and new business places are started giving added employment to members of our race.

Moving to Opportunity tackles one of America's most enduring dilemmas: the great, unresolved question of how to overcome persistent ghetto poverty. Launched in 1994, the MTO program took a largely untested approach: helping families move from high-poverty, inner-city public housing to low-poverty neighborhoods, some in the suburbs. The book's innovative methodology emphasizes the voices and choices of the program's participants but also rigorously analyzes the changing structures of regional opportunity and constraint that shaped the fortunes of those who "signed up." It shines a light on the hopes, surprises, achievements, and limitations of a major social experiment. As the authors make clear, for all its ambition, MTO is a uniquely American experiment, and this book brings home its powerful lessons for policymakers and advocates, scholars, students, journalists, and all who share a deep concern for opportunity and inequality in our country.
