Time Requirements: Part A: 30 minutes, Part B: 20 minutes. In this lab activity, students explore the core life science concepts of Structures and Properties (LS1) and Heredity (LS3) while determining the blood type of WARD'S completely safe and non-toxic Simulated Blood. Standard blood typing procedures are used to teach students about the different blood types as well as antigen/antibody relationships, and how these relationships effect the results of the blood typing procedure.

WARDS Simulated Blood Typing Whodunit Lab Activity Student Study Guide BACKGROUND ABO/Rh Blood System Around 1900, Karl Landsteiner discovered that there are at least four different kinds of human blood, determined by the presence or absence of specific agglutinogens (antigens) on the surface of red blood cells (erythrocytes).

File Type PDF Wards Simulated Blood Lab Activity Answers

The availability of new technologies that enable blood pressure to be measured and recorded continuously or repetitively during prolonged observation periods has created exciting opportunities for studying the physiology of blood pressure regulation and the characteristics of clinical hypertension. Ambulatory blood pressure monitoring has been based on three types of approach. The first of these has utilized an intra-arterial catheter that allows blood pressure to be measured directly and continuously during a full 24-hour period. The second approach is based on non-invasive techniques, and utilizes devices capable of automatically inflating conventional arm cuffs and recording blood pressures at pre-set intervals throughout the day. The third, and most simple method, has depended upon semiautomated techniques that require the subject to inflate a cuff at convenient intervals during the period of observation. During the last few years, concerted research into these differing techniques has exposed their strengths and shortcomings. Overall, however, there has been a growing perception that these approaches to the measurement of blood pressure might add considerably to the information obtained in the doctor's office by the traditional single or casual reading. This book summarizes the state of the art in ambulatory blood pressure monitoring.
